About me

Software Developer Apprentice with practical experience developing software solutions within a professional environment. Currently completing a Level 4 Software Developer Apprenticeship, where I have developed skills in Python, PHP, HTML, MySQL, and Git. I work across the software development lifecycle, contributing to web applications, enhancing existing systems, and supporting the delivery of real-world projects.

Alongside my apprenticeship, I have built a strong foundation in software engineering through problem-solving, writing maintainable code, and undertaking additional learning to expand my technical knowledge. I am now seeking a Level 6 Software Engineering Degree Apprenticeship to further develop my technical and professional capabilities, tackle increasingly complex challenges, and build a successful long-term career in software engineering.

Experience

Software Developer Apprentice | GeoSoft Care

January 2026 - Present

- Develop and maintain web applications within a professional development team.
- Work across the Software Development Lifecycle SDLC from development to deployment.
- Build and enhance features using PHP, HTML, CSS, and SQL.
- Use Git/GitHub for version control and collaborative development workflows.
- Debug and resolve software issues by identifying root causes and implementing fixes.
- Collaborate with developers and stakeholders to deliver software requirements.
- Write clean, maintainable code following best practices and coding standards.

Computer Science Teaching Assistant Volunteer) | Shireland Collegiate Academy Nov 2024 – Mar 2025

- Supported students with programming tasks and debugging exercises during computer science lessons.
- Assisted teachers in delivering technical content and reinforcing coding concepts.
- Helped learners troubleshoot code, improving understanding of core programming principles.
- Developed communication and mentoring skills by explaining technical concepts clearly.

Technical Skills

Programming Languages:

Python, PHP, JavaScript, HTML, CSS, SQL

Software Engineering:

Object-Oriented Programming
Software Development Lifecycle SDLC
Debugging and Problem Solving Full Stack Web Application Development (frontend, backend, database integration)

Databases:

SQL Queries, basic database design)

Tools and Technologies

Git, GitHub

VS Code

System debugging and troubleshooting
TryHackMe Cybersecurity Labs and Foundational Security Concepts)

Electrical Assistant / Shadowing | J.R Building and Maintenance Services Ltd

Nov 2025 – Jan 2026

- Assisted with preparation of tools, materials, and site setup for electrical work.
- Observed fault-finding, testing, and safe working practices in real-world environments.
- Supported basic installation tasks under supervision, including wiring preparation and fittings.

Education

Level 4 Software Developer Apprenticeship (In Progress)

Firebrand Training / BPP

Software development, programming, and professional workplace training

Focus on Python, PHP, web development, databases, and version control (Git)

Applying learning directly in a live software development environment

A-Levels

Mathematics – E

Computer Science – D

Business Studies – Distinction

GCSE

Mathematics – Grade 7

Combined Science – Grade 6-5

English Language – Grade 5

English Literature – Grade 5

History – Grade 6

Computer Science – Grade 6

Business Studies – Distinction

Projects

Portfolio Website

- Built a personal developer portfolio to showcase projects and technical skills.
- Developed using HTML, CSS, and JavaScript.
- Hosted on GitHub Pages.
- GitHub: <https://mabdullahdeveloper.github.io/>

Planet Protectors (Python Game)

- Developed an educational game using Python and Pygame to teach environmental awareness.
- Implemented interactive quiz mechanics, hints, and scoring system.
- Demonstrates understanding of object-oriented programming and game logic.

Python Automation

- Developed Python automation scripts to streamline repetitive tasks and improve efficiency.
- Created tools for file management, data processing, and workflow automation.
- Applied debugging and problem-solving techniques to produce reliable, maintainable code.
- Strengthened practical Python skills through hands-on automation projects using industry best practices.
